Link data from diverse information systems to access intelligence more quickly, share it broadly with employees at any level, and leverage existing investments in IT.

Streamline processes, enhance ROI, and reduce TCO

Your application integration initiatives are complex. They demand an approach that encompasses clear business objectives, business process integration, and collaborative strategies. They also require innovative, flexible, and proven integration technology for application and B2B integration.

QAT Global's enterprise application integration approach is derived from years of cross-industry experience and technology expertise. Highly scalable and based on new platforms, it ensures that entire multi-enterprise applications are integrated and developed within the context of the business; that the systems satisfy business requirements within all levels of the enterprise; and that they remain flexible and responsive to changes in the business strategy.

Benefits

Improved interoperability and business agility

Increased standardization and interaction across business functions

Reduction in complexity and number of fail points within application architecture

Enhanced value from related technology investments

Increased integration of new enterprise technology with existing system

Lower cost and reduced risk by utilizing COTS applications
