

Testing Services for Existing Dev Teams

A CLEAN, AGILE, OBJECTIVE TESTING APPROACH

We believe that there are no shortcuts to success. A product must work perfectly, without exception if it hopes to succeed. However, that's easier said than done. QAT Global helps you realize that goal by taking care of the tedious software testing and quality assurance process for you.

Our professional software test engineers have decades of cumulative experience in designing and developing complex application software, test software, and test systems. This team of top-tier testers will put your application through a multitude of rigorous, purpose-built test processes, and identify even the most elusive bugs.

From multi-tier on-premise applications to cloud based apps, we create and deliver innovative testing services as an extension of your test team.

LET'S TALK!

Test Strategy Development

We develop a clearly articulated plan that determines the scale of the project. This well thought plan helps the team to take into account all the activities related to the testing process.

Quality Consulting

Our consulting team helps the business improve testing processes & deliver capabilities. The team makes a risk-based, measurable & sustainable improvement roadmap aligning with the client's business objectives.

Quality Planning

We develop a meticulous plan that describes the quality objectives and specifies the quality engineering and control activities to be performed on a day-to-day basis.

Test Management

We organize and control the processes and artifacts required for efficient and thorough testing. This enables the testing team to plan, execute and assess all testing activities within the overall software testing framework.

Test Execution

We identify the defects and document the test case results to track and manage the test progress until all the planned tests are completed.
